

CliniCalm™ 1%

This soothing treatment contains maximum strength 1% hydrocortisone with a calming ingredient blend to provide anti-irritant benefits to the skin. It is ideal for temporary relief of itching associated with eczema, psoriasis, dermatitis and rashes due to poison ivy, oak or sumac; and following any non-invasive treatment, such as chemical peels or microdermabrasion, post-waxing and shaving.

Active ingredients:

Hydrocortisone (1%) – a corticosteroid hormone used to relieve topical itching, irritation and discomfort.

Key ingredients:

Bisabolol – helps reduce inflammation and irritation while soothing skin and restoring suppleness; it also protects the skin against daily environmental stress.

Ceramide III – supports the renewal of the skin's natural protective layer and forms an effective barrier against moisture loss; improves long-term moisturization and protects skin from external offenders.

Asiaticoside – a novel ingredient that helps inhibit MMP1 to reduce collagen degradation while supporting dermal regeneration.

Hyaluronic acid, honey, phospholipids and sphingolipids – this blend normalizes water absorption and repairs the lipid barrier of dry and irritated skin; it forms a hydrating film and provides a long-lasting moisturizing effect.

Beta-glucan – derived from oat, this ingredient reduces irritation while also stimulating the strengthening of damaged skin.

Directions for use: After gentle cleansing, apply a nickel-sized amount to area of treatment, not to exceed three to four times daily. Follow with the appropriate PCA SKIN® moisturizer with SPF in the daytime, nourishing moisturizer in the evening, or use as directed by your physician or skincare professional. **This product is indicated for no more than seven days of consistent use.**
